About

I'm a full-stack web developer working in JavaScript, React, Node.js, Express, MongoDB, and Ruby on Rails.

Previously I worked as a business development representative for a startup. I enjoyed collaborating with the engineers in order to provide technical demonstrations that matched potential clients' needs. Being a business development representative taught me the ability to initiate and drive projects to completion with minimal guidance and to apply new skills sets in face-paced environments.

Currently I'm building a React chess app.

—

Skills

JavaScript	React
MongoDB	jQuery
Node.js	Express
Ruby on Rails	PostgreSQL
HTML	CSS
